CHOOSING THE RIGHT CLEAN

Each package is designed for a different level of cleaning and property condition.

Please refer to the package guide below for the complete list of inclusions.

STANDARD CLEAN

Routine upkeep for a regularly maintained home

A General Clean focuses on the essential areas of your home, including routine dusting and surface wiping, kitchen and bathroom cleaning, vacuuming and mopping. It is best suited to homes receiving regular cleaning and helps maintain a consistently clean, fresh and comfortable environment.

DEEP CLEAN

A more detailed clean for extra attention and built-up grime

A Deep Clean includes the General Clean tasks with additional time and attention given to detailed areas, fixtures, edges and accessible build-up throughout the home. It is ideal for a first clean, seasonal refresh or a home that has not received detailed cleaning for some time.

VACATE CLEAN

A comprehensive clean to prepare an empty property for handover

A Vacate Clean is designed for an empty property at the end of a tenancy. It provides a detailed top-to-bottom clean of the areas listed in the agreed Scope of Works, helping prepare the home for its final inspection. The final bond outcome is determined by the landlord or property manager and may also be affected by damage, maintenance and other tenant responsibilities.

UNDERSTANDING CLEANING RESULTS

Professional cleaning can greatly improve a surface; however, the final result can be influenced by its age, material, condition and previous wear.

Our Approach

We work carefully and use cleaning methods appropriate for each surface, aiming to achieve the best possible result while protecting your home and its finishes.

Walls & Painted Surfaces

Wall washing removes general surface dirt and marks where possible. Stains, adhesive residue, paint wear and existing surface damage may still remain visible.

Ovens & Appliances

Included oven and appliance surfaces are cleaned to remove grease, food residue and general build-up. Results can be affected by burnt-on carbon, rust, permanent staining, wear and damaged finishes.

Pet Hair

Pet hair is removed from included surfaces using appropriate vacuuming and cleaning methods. The time required and final result can vary depending on the amount of hair and how deeply it is embedded.

Grout & Silicone

Grout and silicone are cleaned to remove surface dirt and build-up. Results can be affected by deep staining, mould discolouration, ageing and deterioration.

Tiles, Glass & Mineral Build-up

Soap scum and mineral deposits are cleaned using methods appropriate for the surface. Results can be affected by permanent staining, etching, scratches and the condition of the material.

Windows & Tracks

Included windows and tracks are cleaned to remove accessible dirt and build-up. The final appearance can be affected by existing scratches, clouding, corrosion and permanent staining.

Older & Worn Surfaces

Cleaning results depend on the material, age and condition of each surface. Some staining, discolouration, residue or signs of wear may remain after cleaning.

We work carefully and aim to achieve the best possible result while protecting your home and its finishes.
